LOKESH GANIGA

Java Full Stack Developer

Bengaluru, India | +91 8073870796 | lokeshganiga.developer@gmail.com | GitHub | Portfolio

PROFESSIONAL SUMMARY

Java Full Stack Developer with hands-on experience building and delivering full-stack web applications using Java, Spring Boot, React.js, REST APIs, and MySQL. Skilled in designing scalable backend services, building responsive frontend interfaces, and integrating AI/ML capabilities into production-style applications. Strong foundation in DSA, Agile development, and end-to-end SDLC, backed by a published research paper in deep learning-based medical diagnostics. Available to join immediately.

INTERNSHIP EXPERIENCE

Java Full-Stack Developer Trainee | Besant Technology, Bangalore | On-site [certificate] Jan 2026 – July 2026 (Ongoing)

- Built and delivered an AI assistant using Spring Boot and the Gemini API, enabling automated conversational responses and reducing manual query handling.
- Engineered a Chrome extension to fetch and parse Gmail content via API integration, streamlining data retrieval across 3+ endpoints.
- Strengthened proficiency in Core Java, Python, SQL, and MongoDB while applying Data Structures & Algorithms (DSA) and manual testing practices across training projects.
- Skills applied: Java, SQL, Spring Boot, Django, HTML/CSS, MySQL, DSA, Manual Testing.

Java Full-Stack Developer Intern | Tech Fortune Technology, Bangalore | On-site [certificate] Feb 2025 – Aug 2025

- Developed a secure Vulnerability Assessment and Penetration Testing (VAPT) web application that automated vulnerability scanning across target systems and auto-generated remediation reports, cutting manual assessment effort significantly.
- Collaborated across the full-stack pipeline — API development, troubleshooting, and integration testing — strengthening both backend and frontend delivery in a production-style environment.
- Skills applied: Python, JavaScript, Django, HTML/CSS, RESTful APIs, MongoDB.

Java Intern (Frontend) | Techshreshta Solutions LLP, Kundapura | Remote [certificate] Dec 2023 – May 2024

- Built responsive, cross-browser web applications using React.js, JavaScript (ES6+), HTML5, CSS3, and Bootstrap, improving UI consistency across devices.
- Drove frontend-backend integration through REST API consumption and reusable component development, following Agile sprints and Git/GitHub version control.
- Skills applied: JavaScript, HTML5, CSS3, React.js, Bootstrap, REST APIs, Git/GitHub, Agile.

TECHNICAL PROJECTS

Loki's Engine – Custom Search Engine (GitHub)

- Built a self-hosted privacy-focused metasearch engine using SearXNG and Docker, aggregating search results from multiple search engines through a unified web interface.
- Containerised and configured the search service with Docker Compose, implemented custom instance branding, and maintained secure configuration management using Git and .gitignore.
- Technologies: SearXNG, Docker, Docker Compose, YAML, Git, GitHub, Linux/WSL2.

Mem0 AI Agent (GitHub)

- Built an AI-powered memory-enabled agent using Mem0, enabling persistent user context and personalised responses across conversations.
- Integrated memory management with an AI workflow for storing and retrieving relevant conversational information and configured the application environment for local development.
- Technologies: Python, Mem0, AI/LLM, REST APIs, Git, GitHub, Virtual Environment.

Java Redis – Redis-Inspired Key-Value Database (GitHub)

- Built a Redis-inspired in-memory key-value database in Java, implementing core data storage and retrieval functionality from scratch.
- Designed command-based key-value operations and explored fundamental concepts of in-memory databases, data structures, caching, and efficient data access.
- Technologies: Java, Data Structures, Key-Value Storage, In-Memory Database, Git, GitHub.

Heart Abnormality Detection System (GitHub) [Published Paper]

- Designed a CNN-based deep learning model to detect arrhythmia from ECG signal data, achieving reliable classification accuracy validated through a published research paper.
- Deployed the model via a Flask-based web application with REST API endpoints, enabling real-time predictions from uploaded ECG signal inputs.
- Technologies: Python, Flask, Java, Deep Learning, CNN, ECG Signal Processing, REST APIs, Data Preprocessing.

TECHNICAL SKILLS

Languages: Java, JavaScript, SQL
Frameworks & Libraries: Spring Boot, React.js, Node.js, WordPress
Web Technologies: HTML5, CSS3, REST APIs, Responsive Web Design, UI/UX (Figma)
Databases: MySQL
Tools & Platforms: Git, GitHub, Postman, VS Code, Eclipse, Maven, N8N (Automation)
Core Concepts: Data Structures & Algorithms (DSA), OOP, SDLC, Agile Methodology, Testing & Debugging

EDUCATION

Moodlakatte Institute of Technology (VTU), Kundapura | CGPA: 7.0 — B.E., Computer Science and Engineering | Full Time | Sept 2021 – Aug 2025

Govt PU College, Byndoor | Percentage: 65% — PUC | PCMCs | Full Time | July 2019 – June 2021

CERTIFICATIONS & TRAINING

- **Oracle:** [Certificate] Agentic AI Certified Foundations Associate
- **Coursera:** [Certificate] Data Analytics (Google), Artificial Intelligence Essentials, Make Data-Driven Decisions (Google), Foundations: Data, Data, Everywhere (Google)
- **UiPath:** [Certificate] RPA Citizen Developer Foundation; UiPath SKILL-A-THON Developer
- **Google Cloud:** [Certificate] Trust and Security with Google Cloud
- **LinkedIn Learning:** [Certificate] AWS and React – Creating a Full-Stack App; Generative AI
- **AICTE:** [Certificate] Student Learning Assessment – Algorithms; Student Learning Assessment – Programming and Data Structures

I hereby declare that the above information is true and up to date.
